TrailRaker™

XC Tire for Wet/Muddy Conditions

Panaracer TrailRaker 1.95

26x1.95
530g (ave.)
Aramid Bead

1. ZSG Ultima compound

Panaracer's latest ZSG compound utilizes a mixture of polymers and silica to produce a tire with unrivalled grip in wet conditions. ZSG Ultima is also more durable than other soft condition tire compounds.

2. Optimum Knob Pattern

By arranging the knob pattern closer to the centre of the tire, the TrailRaker provides maximum grip on even the most extreme of cambers yet will not clog up, even in the muddiest of conditions.

3. Pyramid knobs

At 5.5mm in height the centre and middle knobs are designed to dig deep into muddy ground providing maximum traction and performance in wet conditions.

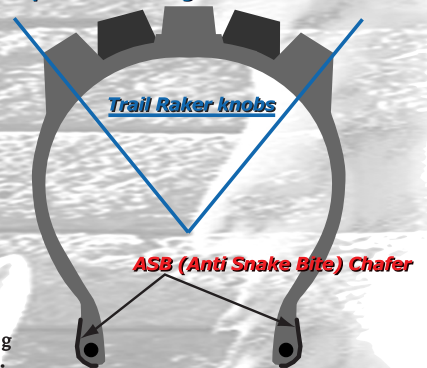

4. 'Double Decker' knobs

The structure of the central 'Double Decker' knobs increases stiffness for improved acceleration and braking.

5. ASB Chafer

Panaracer's unique ASB (Anti Snake Bite) chafer is manufactured using anti-rebound rubber to prevent the chance of pinch flats by over 40%.

Optimum Arrangement for Knobs
