Panaracer XAIR™ SILICA FLEX BUTYL COMPOUND
26x1.625-2.10

Our Silica Flex Butyl Compound provides the perfect balance between a smooth, air like ride and air retention rate.

Silica Flex Butyl Compound is 1.5 times more elastic than latex and 2.3 times more than butyl. The Xair gives you high shock absorption performance while lightning the stress riders feel during a race or ride. Additionally, you will find and keep your line better even over rough, demanding terrain and hard cornering. With 11 times greater capability at holding air, the Xair won't let you down like latex tubes that begin to lose air immediately upon inflation.

Debut XAIR Silica Flex Butyl Tube

2003 High Performance New Material Tube
